

## NF-0611SB LED NEON FLEX LIGHT

## 6x11

PRODUCT SPECIFICATION

Custom assembled in Australia

## Product Features

- This is a silicone based neon flex, it has excellent resistance to yellowing and cracking
- Silicone can withstand extreme temperatures and environments such as salt water.
- Silicone is resistant to the harsh effects of UV light and chemical exposure.
- Neon flex produces a uniform light output without dots.
- Assembled in Australia to desired specifications.

## Silicone vs PVC

| Materials <br> Main Parameters | Silicone Neon Flex | PVC Neon Flex | Notes |
| :---: | :---: | :---: | :---: |
| Colloid features @ -40 ${ }^{\circ} \mathrm{C}$ | No cracking after 30 days | Totally Cracked | Low temperature resistance of silicone is far superior than PVC or epoxy materials |
| Colloid features @ 120 ${ }^{\circ} \mathrm{C}$ | No obvious change after 72 hours | Colloid changed to yellow and deformed after 2 hours | High temperature resistance of silicone is far superior than PVC or epoxy materials |
| Colloid features @ 180 ${ }^{\circ} \mathrm{C}$ | No obvious change after 72 hours | Colloid changed to brown and melted after 2 hours | Above $150^{\circ} \mathrm{C}$, PVC is easily hydrolised. Viscosity becomes weak and easily separated |
| Held in seawater for 72 hours | No obvious change | Series atomisation on the surface | Silicone has a high resistance to acidic, alkali and salt substances |
| Thermal conductivity | Good conductivity | Very poor conductivity | The LEDs within the neon flex requires good thermal conductivity to ensure reliability |

## Please Note:

1. Fixed colours such as blue or orange are available.
2. To avoid voltage drop we do not recommend lengths longer than 5 m for 12 V and 10 m for 24 V . If longer lengths are required we suggest powering the light from both ends.
3. Cutting distances my vary slightly.

## Assembled Product

## Cable Entry Options

Bottom Entry

Left Side Entry

Right Side Entry

## Mounting Options

## Anodised Aluminium Bracket

Sold as 20 mm clips or 3 m lengths

## Stainless Steel Bendable Clip

Stocked in 100mm reels (sold per metre)

## Silicone is typically difficult to adhere to.

Double sided tape can be used, however a suitable primer needs to be applied (contact us).

## Caution

- Care needs to be taken when transporting and installing the product.
- Lengths greater than $2 m$ requires no fewer than 2 people. The neon flex should always be supported and not left hanging by it's own weight.
- Modifying or shortening the neon flex is strongly discouraged.
- Avoid twisting the neon flex
- Only bend the neon flex in the intended direction i.e. either side bend or top bend.
- Adhere to the minimum bending radius

## Correct Bending Direction

Side bending direction

## Wrong Bending Direction

Do not bend up or down, sideways only

Minimum bending radius is 50 mm

Do not twist the neon flex
